1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 8 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by De Haan et al. (cited and provided by applicant).

The system of De Haan (noting particularly Figs. 1 and 4-6) involves inputting a video signal of a film format to element 20; generating motion estimates for up-conversion of fields (element 30); scaling the motion vectors using element 60; and subsequently up-converting the input fields to high-definition format (i.e. that having an increased field rate, in this case 100 Hz: col. 3 lines 7-8) at the output of element 20, thereby meeting claims 1 and 5.

As for claim 15, the conversion arrangement is incorporated in a television receiver as shown in Fig. 6.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gillard is also applicable to claims 1, 8 and 15 as he also converts from any format to any other format by applying scaled motion vectors (col. 3 lines 44-52 pointing out input/output

formats; col. 18 line 66 – col. 26 line 5 regarding the motion vector scaling and output conversion selection therefrom).

4. Claims 2-7, 9-14 and 15-20 appear allowable over the prior art.
